Art of Prefabrication

In Pekabex Group we have a department of complex realization of objects including realization of "turnkey" objects.

DESIGN

Own design offices with over 140 engineers. Ability to realize most complex projects. Professional consulting. Modern and economical design.

PRODUCTION

Automated production process in four strategically located plants. Max weight 100 t, concrete grade up to C70/85 & even 100 MPa on demand.

DELIVERY

Safe transport inside and outside Poland. Transport by truck, train, ship or intermodal.

ASSEMBLY

Assembly of precast structures regardless of the time of year and weather.

We produce prefabricated construction elements such as:

- walls
- columns
- beams and girders
- floor slabs
- foundation elements

Wide range of other products:

- civil engineering elements: retaining walls, bridge embankment coverings, bridge beams, tubings
- stadium elements: auditorium slabs, toothed beams, columns

ELEMENTS:

Slabs

We manufacture:

- TT slabs
- HC slabs
- massive slabs
- prestressed massive slabs
- filigree slabs

including electrical and sanitary installations

Walls

Prefabricated single- and multilayer wall elements with insulation layer, built-in elements such as windows, electrical sockets, etc.

Facade layers may be:

- smooth or textured
- painted or plastered
- pigmented
- brick faced
- with decorative matrix

Balconies

Systems of balcony slabs include insulation connectors and various range of fasteners.

Columns

Made with a matrix imprint (rectangular and round).

Stairs and landings

Elements of staircases, including prefabricated stair flights with anti-slip patters, terrazzo finish, built-in elements for railings.

Gdańsk II

The new factory is the fifth plant of the Pekabex Group.

It is equipped with fully automatic lines for the production of:

- filigree slabs
- double filigree walls
- solid walls

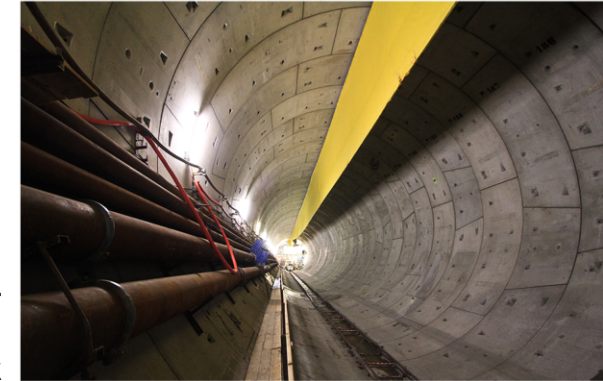

Production capacity is 2000 sqm per day.
